

For Your Veterinarian - KSDL

Simple Steps for your vet to set up a Kansas State Rabies Diagnostic Account and make Titer Testing affordable!

1. Go to the website www.ksvdl.org
2. There are (4) pictures in the middle of the screen, click on the one titled, "Submission Forms"
3. Look to the right on the screen that pops up and click on "Client Registration Form".
4. Fill out your clinic/hospitals information and click "Submit"
5. You will receive an email with your Diagnostic Lab Code.

Once you have this code you the Veterinary Clinic/Hospital are ready to submit samples.

1. Go to www.ksvdl.org
2. Click on the third picture that says, "Submission Forms".
3. Scroll down towards the bottom and find "Core-Vaccine Titer Submission Form.
4. Under that heading there are two items, click on Core Vaccine Titer - Online Only
5. "Core Vaccine Titer Submission Form" pops up as the next screen.
6. Enter your "Client Account Number" which starts with the letter D plus some numbers.
7. Hit enter and all your clinic/hospital information pops up.
8. At the bottom it says Patient Details, here you put your client's information and the pets.
9. You can put in several clients and pets under one submission form. Hit the "Submit" tab.
10. You, the veterinary clinic/hospital will immediately receive (2) emails, one with the submission form and a second email with a free UPS label.
11. Print the submission form, put it in a box or bubble wrapped lined envelope with the sample(s) and place the UPS label on. Give it to the UPS driver, a UPS mail drop or a UPS center. No refrigeration needed, results will come to the Vet clinic/hospital by e mail in 2 weeks.
12. You can simply forward the results to the owner.
13. The fee for the modified Rabies RFFIT test is [\\$33](#). For the core vaccine test which includes rabies, distemper, parvo and Adenovirus its [\\$55.50](#). An endpoint Screen (not for travel is [\\$120](#). It is not yet on the online system.
14. Add a reasonable markup fee to make a reasonable profit.

Instructions for Preparing Sample: Draw 2-3 cc's of whole blood and spin in a serum separator tube for 10 minutes. Leave it in the serum separator tube.

If you the Veterinary clinic/hospital have any difficulties with the process call Client Care at Kansas State 785-532-5650.
